

*Always verify tips or orifices you received are the size which you require before using with chemical. Chemical rates need to be obtained from your chemical dealer.

TeeJet® Flow Regulators

When using a orifice with orifice o-ring, the orifice must be placed inside the o-ring groove for proper application.

How to order:

Specify orifice plate number.

Example: CP4916-008

Note: Always insert orifice Plate with side marked with number facing the outlet.
Material: Stainless Steel

Flow Regulators are usually mounted behind cultivator shanks for the subsurface application of liquid fertilizers and soil fumigants. They are also used for above-ground streaming applications.

*To determine the orifice plates you need, use the following equations: GPA (Gallons Per Acre) x MPH (Miles Per Hour) x W (Nozzle Spacing in Inches) / 5940

**Tabulated flow rates are for spraying water into air atmospheric pressure. When using fertilizers the weight of the solutions must be accounted for by using a conversion factor for specific gravity. The conversion factor for 28% is 1.13, the conversion factor for 11lb fertilizer is 1.15.

Example for desired rate: 5 Gallons Per Acre; 6 Miles Per Hour; 30" Nozzle Spacing; Application 32%

5 (GPA) x 6 (MPH) x 30 (Spacing in inches) / 5940 = .152 GPM (Gallons Per Minute)

.152 (GPM) x 1.13 (Conversion Factor for 32%) = .175 GPM

Refer to GPM column on the charts below to find .175 GPM at "Your" desired pressure.
